

Flow chart of a noise abatement plan

analysis of the conflict areas

analysis of people and utilizations affected:

- number of population,
- kinds of sensitive utilizations etc.

↓

- where are measures particularly urgent because of the high number of persons affected or the high noise pollution?

analysis of noise sources:

- traffic volume,
- kinds of vehicles and factories etc.

↓

- where must noise reduction measures be taken to obtain the greatest possible effect?

noise action plan

concept of measures

(technical, structural, planning, designing, traffic, organisational measures)

with statement of the effect, the time period of realisation and the expected costs

realisation of measures

control of success
